

Cross spacer product family

ADVANTAGES

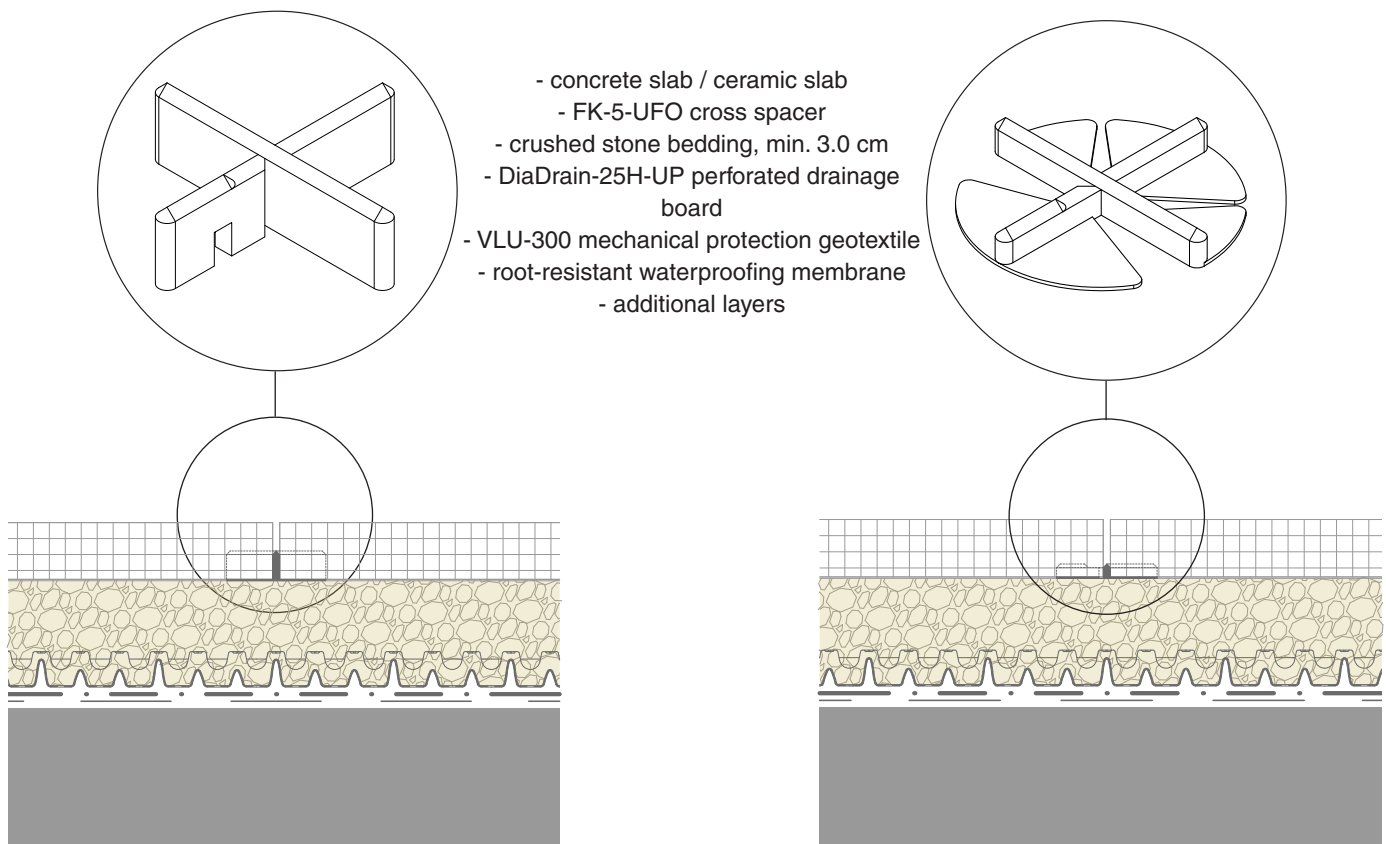

- Can be used as cross and T-joint spacers, therefore suitable for different laying patterns (diagonal, parallel, offset)
- The support plate prevents the cross spacers sinking into the gravel bed
- The cross spacers are wedge-shaped, making it easier to reinsert the paving slabs
- The height of 10 mm makes the FK-UFO cross spacers perfect for the standard 20 mm of ceramic and thicker concrete slabs
- The colour choice (black, gray and transparent) makes it possible to harmonize the colours of the cross spacers with the slab

APPLICATION

The FK cross spacers speeds up the process of laying down pavement slabs and secures the permanent spacing between paving slabs, thereby increasing the aesthetic appearance of the terrace and encouraging better surface water drainage.
